Nasatka Barrier Embraces Movement of Comprehensive Security

Clinton, MD - (Monday, February 23, 2009) – Since September 11, 2001, 34-year-old security veteran Nasatka Barrier, Inc. has been focusing on the importance of strategic partners when approaching preventative maintenance and new codes for ensuring a building or facility for its lifetime.

Director of Sales, John Scolaro said, "Critical infrastructure is invaluable for both government and private industry, especially since 9/11. Given new requirements, the architectural design and engineering (A&E) industry should incorporate critical infrastructure security in their work, and security must be essential in their designs."

Scolaro also noted, "In today's market, there are many important factors to include when developing a sensible solution for a security-driven design and construction process for both government and private enterprise, in and out of the United States. Creating a comprehensive security plan is very similar to starting any other business; you must start with senior management and a detailed facility security mission statement. This process is unique with each integrator, but ours really gets down to educating the client on what technologies are state-of-the-art and how to use them to identify and involve the client in the security vulnerability assessment process.

- more -

The A&E industry, military, government and any other end-user really need to work with an integrator that will create a crossroad between sensible security solutions in design and construction and merge them with what is theoretically possible and/or probable with regard to unique threats.

Established in 1975, Nasatka Barriers, Inc. has provided barrier protection for some of the highest profile government agencies, military installations, and corporate facilities in the United States and around the world. They are the originator of the first crash-tested barrier systems developed, manufactured, and installed in the United States, and our ongoing commitment to research and development helps us remain the industry leader.

In actual use, Nasatka perimeter barrier solutions have proven to be an effective vehicle threat deterrent, as well as a reassuring security measure for employees and other authorized personnel.

Today more than ever, Nasatka barrier systems should be an integral part of any new or upgraded maximum-security plan. Whether the concern is the stoppage of terrorist vehicle attacks or the simple prevention of unauthorized vehicle access, nothing gets by Nasatka.
